Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1, 2, 4-6, 8, 14, 18-25, and 70-74 are rejected under 35 U.S.C. 103(a) as being unpatentable over Daikuzono (US 2004/0185067) as modified by Eilers et al (US 2001/0023351).

Daikuzono discloses a device comprising an actuator (41) comprising an abrasive member (21); a piezoelectric material for driving said actuator at a high frequency (see paragraph [0091]); an abrasive material ('peeling agent'); a housing (50); a container (22) comprising a reservoir containing a pharmaceutical (see paragraph [0057]); and a permeable membrane through which the pharmaceutical is released (paragraph [0077]).

Daikuzono discloses the claimed invention except for disclosing the abrasive material being diamond, aluminum oxide, carborundum, or ice. Eilers et al teach in paragraph [0013] that it is known to use aluminum oxide particles as an abrasive material in a microdermabrasion procedure. It would have been obvious to one having ordinary skill in the art at the time of the invention to modify the device of Daikuzono with the teaching of Eilers et al since aluminum oxide particles are effective in microdermabrasion treatments.

2. Claims 34-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Daikuzono as modified by Eilers et al and further in view of Avrhami et al (US 2003/0212397).

Now even though Daikuzono as modified by Eilers et al do not explicitly disclose monitoring feedback using an electrical property attention is directed to Avrhami et al. The Avrhami et al reference teaches in paragraphs [0070], [0121], [0124-5], and [0173] monitoring feedback using a heartbeat to perform a safe ablation procedure. It would have been obvious to one of ordinary skill in the art at the time of the invention to use the teachings of Avrhami et al in the device of Daikuzono as modified by Eilers et al to increase the safety of the ablation procedure for better patient outcome.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
